New Provincial Processing Initiative

SaskMilk is pleased to announce the new Saskatchewan Cottage Industry Program (SCIP) to encourage dairy processing in Saskatchewan.

The SCIP offers potential benefits to both on-farm processing and off-farm processing initiatives in the form of milk discounts for eligible applicants on the volume of milk processed. Encouraging increased processing of higher-value products is a strategic goal of the SaskMilk Board, and the SCIP is designed to provide a net benefit to all producers' bottom lines.

This provincial program complements other programs that encourage processing, such as the Western Milk Pool's 1c4c program and Canadian Dairy Commission's Dairy Innovation Program. The SCIP policy can be viewed on SaskMilk's website at <http://www.saskmilk.ca/for-farmers/policies/saskatchewan-cottage-industry-processing-policy>. If you are interested in the program or have any questions about it, please contact the SaskMilk office and staff will be happy to assist you.

Mental Health Spotlight

The 7 Types of Rest Every Farmer Needs

By Lesley Kelly, Farmer and Co-Founder of the Do More Agriculture Foundation

Have you ever tried to fix an ongoing lack of energy by getting more sleep — only to do so and still feel exhausted?

If that's you, here's the secret: Sleep and rest are not the same thing, although many of us incorrectly confuse the two.

We go through life thinking we'll feel rested by getting a full night's sleep but in reality we are missing out on the other types of rest we desperately need, especially during those peak busy periods like harvest and calving or stressful times, like increased restrictions, cases and divisiveness around Covid-19. The result of only focusing on a few hours of sleep to feel fully rested is a culture of high-achieving, high-producing, chronically tired and chronically burned-out individuals. We're suffering from a rest deficit because we don't understand the true power and potential of rest.

Rest deficit or exhaustion can look like the following symptoms:

- You get easily irritated or have low patience
- You have a strong desire to be alone, socially withdraw
- You struggle to follow conversation
- You have difficulty sleeping
- Your every action feels like a sacrifice
- You have low energy and feel drained
- You have stopped caring about your stressors; "checked out" mentally and emotionally from things
- You have a hard time concentrating or remembering things
- You have physical symptoms like stomach pains and/or headaches
- You find yourself focusing on the negative
- You feel overwhelmed and frazzled

Let's learn to give ourselves permission to rest. Think of your rest or emotional capacity as a bucket. Your bucket may look different from someone else's as we all have different buckets depending on our genetics, life events, age, health and more. Flowing into the bucket are all areas of your life that can cause stress and exhaustion - farm pressures, family pressures, finances, weather, disagreements with neighbours, not eating well, lack of sleep and rest and more. All of these add water to our bucket and eventually, the water will overflow. We've now hit our emotional capacity peak and our mental and physical health is impacted. We'll start to feel burnout, exhaustion, and an increase of symptoms of depression or other mental illnesses and unable to cope with life the way we once did. To stop our bucket from overflowing, we need to add holes to let the water flow out in a healthy way.

Self care rituals and routines and different types of rest is a healthy way to add those holes, let the water out and restore your bucket again.

Rest should equal restoration in seven key areas of your life.

Physical rest - Ensuring your body can recharge by allowing it to slow down and repair. Examples: Naps, earlier bedtime, restful lunch breaks.

Mental rest - We need to recharge when it's hard to concentrate or our observations are hyper critical/judgemental. Examples: Turn off devices, affirmations, music

Emotional rest - Offloading emotional baggage and sharing vulnerability with a trustworthy listener. Examples: Talking to a friend, therapist, and/or support group

Social rest - Restoring ourselves through connecting with others. Examples: Time with friends that affirm us, coaches, mentors, playing a team sport, connecting with self

Creative rest - Breaks for creativity to re-energize resources and gain inspiration. Examples: Read a good book, walk in nature, cooking, looking at art, woodworking

Sensory rest - Retreating from sensory overload by reconnecting with yourself. Examples: Turning off devices, journaling, fresh air, breathing exercises

Spiritual rest - We need to feel anchored and realigned with our sense of purpose and harmony. Examples: Reading scriptures or philosophy, volunteering, meditation

Don't use rest as a reward for being productive. If you need a break, you need a break. It's not something that you should make yourself earn at the cost of your mental health or your bucket overflowing. Sleep alone can't restore us to the point where we feel rested. So it's time for us to begin focusing on getting the right type of rest we need and deserve.

If you or someone in your family or farm team are going through a hard and stressful time and/or feeling exhausted or overwhelmed, reach out. For more resources visit domore.ag/resources.

The Do More Agriculture Foundation is the national voice and champion for mental health in Canadian agriculture and is changing the culture of agriculture to one where all producers are encouraged, supported, and empowered to take care of their mental wellbeing. Producers are among the most vulnerable when it comes to mental health issues. By collaborating with the entire industry and those working to address the state of mental health in Agriculture, we can and will make a substantial impact.

Quota Exchange

The market-clearing price established for the May 2022 Quota Exchange was \$48,300.

The next Quota Exchange will be held on June 15, 2022. All offers to sell and bids to purchase quota through the Quota Exchange must be submitted by midnight, June 6, 2022. SaskMilk recommends that offers and bids be submitted well in advance of the deadline date to ensure adequate time for corrections, if necessary.

When making bids on the Quota Exchange, the price on offers to sell quota is the minimum price that the producer is prepared to accept for that quota. Only if the market-clearing price is equal to or greater than the producer's minimum price will that producer qualify for participation in the Exchange. Conversely, the price on offers to purchase quota is the maximum price that the producer is prepared to pay for that quota. Only if the market-clearing price is equal to or less than the producer's maximum price will that producer qualify for participation in the Exchange. The clearing price is set at the price where the smallest difference exists between the accumulated volume offered for sale and the accumulated volume bid to purchase. The results of the Quota Exchange are outlined in the following table.

MAY 2022 QUOTA EXCHANGE RESULTS

Market Clearing Price per kilogram of butterfat	48,300.00

DFC Update

Dairy farms key part of Canada's sustainability solution

Photo courtesy of McCrea Farms

Canadian dairy farmers are naturally committed to environmental sustainability due to the nature of their work: not only do dairy farmers rely on the land to make a living, but as many farms are passed down from generation to generation, being able to keep thriving on that land is imperative for today – and tomorrow.

Here are just a few initiatives that Canadian dairy farmers are implementing as part of our country's commitment to sustainability:

McCrea Farms is harnessing the power of the sun

McCrea Farms Ltd. built their 95-kilowatt solar array as part of a pilot project through the Smart Energy Company in the summer of 2021. This array of 216 panels is projected to offset all electricity consumption on the dairy operation. They are also taking measures to manage and protect forests and wetlands around their agricultural land.

Vaudet Dairy is enhancing biodiversity

Vaudet Dairy's addition of beehives, bird boxes and other wildlife habitats on their farm is helping to enhance biodiversity around their land. They also support energy efficiency through the installation of 144 solar panels, which generate 59,000 Kwh/year, and they have increased feed efficiency, too.

Ferme Gallant is fueling efficiently

Ferme Gallant Ltée knows the importance of sustainability and takes advantage of incentive programs to help make their dairy farm more efficient, especially around fuel sources. Recently, they were able to heat their entire farm with two naturally dead trees that were otherwise unusable. Ferme Gallant is also helping restore wetlands on their farm with help from Ducks Unlimited Canada.

Clovermead Farms is turning poop into power

Clovermead Farms got its biodigester off the ground thanks to grants from the Ontario government's Green Energy Act, before landing a contract to sell electricity back to the grid. In addition to about 10 tonnes of manure from the farm, Clovermead's digester takes in approximately 8,000 tonnes a year of food waste from local producers and processors.

Stone Ridge Dairy is supporting regenerative agriculture

Stone Ridge Dairy is focusing on growing more plants to build organic matter in the soil. Their land is 70 percent rolling hills and 30 percent potential flood acres. This means soil erosion is always on their minds. They are also interested in environmental efficiencies like air washing systems that allow farmers to make fertilizer off the gasses from their manure.

For more information on the sustainability projects taking place on dairy farms across Canada, visit <https://dairy-farmersofcanada.ca/en/who-we-are/our-commitments/sustainability>.
