Volunteers needed for Agribition!

Important Dates!

SASKMILK PRODUCER MEETINGS
(producer only)

Virtual Session #1 November 1 at 9:00 am
Virtual Session #2 November 1 at 1:30 pm

SASKATCHEWAN DAIRY CONFERENCE

This will be an in person event!

Date: December 5th & 6th, 2023
Location: Saskatoon Inn, Saskatoon, SK

Agribition 2023 is rapidly approaching! The excitement starts November 20 and continues through November 25.

The Milking Demo is a very big part of the Education Program and of Agribition itself. Last year we had 2650 students enrolled in registered programming and attend the milking demos. Our Milking Demos run 4 times daily and is available to all students – pre -registered or not. We see a lot of attendance by non-registered students, families, students, patrons and exhibitors.

If you had a chance to see a demo last year, we get all kinds of questions and interactions! This is a one of kind experience for us at the demo and those attending. We had resoundingly positive feedback!

For the Milking Demo to be successful, we need help:

1. Cows – 4 cows to stay at Agribition from Sunday to Saturday. Compensation available.

2. At least 2 people during the day to manage the cows (washing in the morning, mucking stalls, feeding, milking) – these are paid positions and require people with knowledge in showing, caring and milking. There is also quite a bit of public facing interaction.
3. Volunteers – Set up of the milking demo itself (usually the week ahead). Take down of the milking demo (usually Sunday). Help in the evenings around 9 (milking, mucking stalls, feeding)
4. Speaker for the demos – If anyone is passionate about talking to 500 kids at a time, please let me know – I am willing to share the limelight, lol!

Please contact me at 306-721-9486 if you have any questions. Thank you so much for all the help last year – we could not have been successful without all the support!

Tina

Hoof Trimming Courses

The Western Canadian Certified Hoof Trimmers Association has an upcoming 2 day introductory hoof trimming course, October 23 & 24 in Abbotsford, BC. Must be registered by October 2.

We also have a 3 day Certification Course October 25-27 also in Abbotsford, BC. Must be registered by October 2.

Interested participants can go to our website www.wchta.com for more information or email us at wchta@gmail.com

Mental Health Spotlight

Unearthing the Stress Producers Face and How To Communicate In Stressful Times

Agriculture is an industry that demands tremendous effort, resilience, and adaptability. Canadian farmers face numerous challenges, both external and internal, leading to significant stress levels within the agricultural community.

According to the 2021 Survey of Farmer Mental Health in Canada by Rochell Thompson, Briana Hagen, and Andria Jones-Bitton, 1 in 4 Canadian Farmers felt their life was not worth living, wished they were dead, or thought of taking their life in the last 12 months. Suicide ideation was 2x higher in farmers than in the general public.

What causes high stress in farming?

1. **Financial Uncertainty:** Fluctuating commodity prices, market volatility, and unpredictable weather patterns contribute to significant financial stress. Farmers face immense pressure to maintain profitability while managing high input costs and external factors beyond their control.
2. **Climate Change:** Canadian farmers must grapple with the adverse effects of climate change, including extreme weather events, longer growing seasons, and shifting precipitation patterns. These changes can disrupt crop yields, alter farming practices, and intensify anxiety regarding the future of their livelihoods.
3. **Isolation and Loneliness:** Farming can be an isolated profession, with long hours spent working alone in rural areas. The lack of social interaction and support networks can contribute to feelings of loneliness and emotional strain, particularly during challenging times.
4. **Workload and Time Pressure:** Producers often work long hours, balancing multiple responsibilities, especially during critical periods such as planting/seeding and harvesting seasons. The relentless workload and time constraints can lead to physical and mental exhaustion, adding to their overall stress levels.

During stressful periods it's vital we implement effective communication about our mental wellbeing.

Enhancing Communication When Under Stress:

1. **Building Support Networks:** During high-stress periods, it is essential to surround yourself with a strong support network. Foster relationships with those with similar experiences, agricultural organizations, local community groups, and mental health resources. These connections offer a valuable platform for sharing experiences, seeking advice, and finding solace in the knowledge that others understand the unique challenges you face. By actively participating in these networks, you create a safety net of support that can help alleviate stress and provide solutions to common problems. Check out [AgTalk](#), a peer-to-peer support platform, is powered by Togetherall and designed for individuals in the Canadian agriculture industry. AgTalk provides a safe and anonymous space where individuals 16+ can connect, share, and receive support from a community of peers who understand their unique experiences. With 24/7 clinical moderation, this platform ensures a secure environment for open discussions on mental health.

2. Open and Honest Dialogue: Communication is not limited to seeking help; it also involves expressing your own concerns, emotions, and needs. It is crucial to have open and honest dialogue with your family, friends, and coworkers about the stressors you are facing. Share your worries, aspirations, and challenges with them. By doing so, you allow others to understand your perspective, provide support, and collaborate on finding solutions. Remember, vulnerability is not a sign of weakness; but an indication of strength and a catalyst for growth.

3. Engaging Family and Employees: Producers often work closely with family members and employees. During high-stress periods, it becomes even more crucial to communicate effectively with these individuals. Clearly articulate the challenges you are facing, set realistic expectations, and delegate responsibilities as needed.

Openly discuss the impact of stress on the farm's operations, financials, and wellbeing. By involving your family and employees in the decision-making process and encouraging their input, you can foster a sense of ownership, teamwork, and shared responsibility, easing the burden on your shoulders.

4. Seeking Professional Guidance: There are times when stress may become overwhelming or persistent, affecting your mental and emotional wellbeing. In such cases, do not hesitate to seek professional guidance. Mental health professionals, counsellors, and therapists are equipped to provide the necessary support and guidance during challenging periods. They can help you develop coping mechanisms, manage stress, and offer valuable insights to navigate difficult emotions. Professional support can greatly contribute to your overall wellbeing and resilience.

5. Communicate with Financial Institutions: Financial pressures often amplify stress levels for producers. During challenging times, it's essential to maintain open lines of communication with your financial institution. Discuss your situation, explore potential solutions, and inquire about any available assistance programs. Timely communication can help alleviate financial burdens and provide you with more stability and peace of mind.

6. Prioritize Self-Maintenance: Communication with oneself is just as important as external communication. Pay attention to your own needs and wellbeing during high-stress periods. Take breaks, engage in activities that bring you joy, and ensure you have adequate rest and nutrition. Nurturing your own mental and physical health enables you to communicate more effectively and cope better with the challenges at hand.

7. Reflect and Learn: After a high-stress period has passed, take the time to reflect and learn from the experience. Engage in self-reflection and communicate with your team to evaluate what worked well and what could be improved upon. By learning from past experiences, you can develop better strategies to handle future stressors.

For local agriculture resources, [visit here](#).

In the face of high-stress periods, effective communication is vital. It not only helps alleviate stress but also fosters resilience, builds stronger relationships, and enables your community to thrive in the face of adversity.

The Do More Agriculture Foundation is the national voice and champion for mental health in Canadian agriculture and is changing the culture of agriculture to one where all producers are encouraged, supported, and empowered to take care of their mental wellbeing. Producers are among the most vulnerable when it comes to mental health issues. By collaborating with the entire industry and those working to address the state of mental health in Agriculture, we can and will make a substantial impact.

Farmers are always looking for innovative ways to improve the sustainability of their farming operations

It's no surprise to any Saskatchewan dairy farmer that plastic bale wrap, silage bags and bunker covers/tarps are vital in extending the shelf life and nutrition of feed for their herds. Increasingly apparent though, is that these great tools also pose a challenge for management once used. With a deep commitment to expanding sustainability on farm operations across the province - a recurring concern for dairy farmers - the solution may just be around the corner.

Finding ways to recycle silage plastic

Acting on a desire to test new options to manage used silage plastics, two dairy farmers in Saskatchewan jumped at the chance to participate in a 2021 pilot project to test agriculture film management using an on-farm compactor. They found the compactor worked well with the advantage of needing no power to operate it, but there was a heavy investment in time and sweat equity to prepare the first silage pit cover bales for recycling.

Environmental stewardship non-profit Cleanfarms, one of Dairy Farmers of Canada (DFC)'s key sustainability partners, received similar feedback from farmers from outside of the province who were also testing out these compactors, and this led to a new and improved compactor that now uses hydraulics instead of a winch.

Some of this work is made possible through funding provided by DFC's [Here for Tomorrow](#) campaign. Through this campaign, DFC demonstrates its commitment to promote and advance sustainability in the dairy sector. In fact, in February 2022, DFC unveiled a goal to reach net-zero greenhouse gas (GHG) emissions from farm-level dairy production by the year 2050.

Finding end markets for silage plastics continues to be challenging, and this is why it is so important to work directly with farmers to find ways to keep agriculture plastics as clean as possible. Cleanfarms is optimistic that building up the volume of agriculture plastics and ensuring clean material streams will attract new, long-term end market commitment for recycling.

Dairy farmers who want to get more involved can connect with Tammy Shields (shieldst@cleanfarms.ca), Cleanfarms' Saskatchewan Program Advisor, to discuss potential options in your area.

Full Circle Plastics compactor

Twine recycling continues

Cleanfarms continues to work with its 44 collection sites to give farmers the opportunity to recycle twine using a bag-based collection model. This work is part of Cleanfarms' [Building a Zero-Plastic-Waste Strategy for Agriculture initiative](#) and has been in place since 2021, funded through Agriculture and Agri-Food Canada's [Canadian Agricultural Strategic Priorities Program](#) a \$50.3 million, five-year program to help the agricultural sector adapt and remain competitive.

Next steps

To learn more about ag recycling in Saskatchewan, about these specific projects and what happens to plastic collected through Cleanfarms' programs at cleanfarms.ca

Quota Exchange

The market-clearing price established for the September 2023 Quota Exchange was \$42,000.00.

The next Quota Exchange will be held on **October 16, 2023**. All offers to sell and bids to purchase quota through the Quota Exchange must be submitted by midnight, **October 6, 2023**. SaskMilk recommends that offers and bids be submitted well in advance of the deadline date to ensure adequate time for corrections, if necessary.

When making bids on the Quota Exchange, the price on offers to sell quota is the minimum price that the producer is prepared to accept for that quota. Only if the market-clearing price is equal to or greater than the producer's minimum price will that producer qualify for participation in the Exchange. Conversely, the price on offers to purchase quota is the maximum price that the producer is prepared to pay for that quota. Only if the market-clearing price is equal to or less than the producer's maximum price will that producer qualify for participation in the Exchange. The clearing price is set at the price where the smallest difference exists between the accumulated volume offered for sale and the accumulated volume bid to purchase. The results of the Quota Exchange are outlined in the following table.

SEPTEMBER 2023 QUOTA EXCHANGE RESULTS

Market Clearing Price per kilogram of butterfat	\$42,000.00

DFC Update

What does the recent CPTPP decision mean?

On September 5, a trade dispute settlement panel ruled in favour of New Zealand in two of the six claims it had raised concerning the Canada dairy tariff rate quota (TRQ) administration. In its decision, the panel found that the pooling system is inconsistent with the obligations that Ottawa has signed with New Zealand and other countries under the Comprehensive and Progressive Agreement for the Trans-Pacific Partnership (CPTPP).

The panel decisions deal with the way in which import quantities of foreign dairy products - the TRQs - are managed in Canada. In both claims, the Panel ruled that Canada must eliminate the tactic of "pooling."

In this case, "pooling" is linked to the manner Canada has allocated these tariff quotas. Canadian processors were given priority access to these quotas, meaning they were granted import permits in priority before other groups of eligible applicants.

The panel rejected four of New Zealand's claims and confirmed that Canada has some discretion as to how it administers its TRQs.

"Dairy Farmers of Canada is disappointed with the dispute panel's ruling (pools) which found that two of the six elements challenged by New Zealand were inconsistent with the Comprehensive and Progressive Agreement for Trans-Pacific Partnership (CPTPP)," said David Wiens, President of Dairy Farmers of Canada. "Nonetheless, the panel found that 4 of New Zealand's claims were unfounded.

"We now call on the federal government to do a thorough review of the measures the government of New Zealand has put in place to support its dairy sector to ensure that they are consistent with its international trade obligations."

In August, Saskatchewan had a monthly CDC allocation of **1,030,201 kilograms** of butterfat. Saskatchewan production was **3,690** of butterfat under and cumulatively over by **1,366,645 kgs** of butterfat. On a percentage basis, Saskatchewan is **11.18%** above our CDC allocation flexibility limits based on the Continuous Quota model. The -2.00% lower flexibility limit is in effect.
